

# RIDONG GLASS

## Welcome to the future

Introducing Kommerling Gold, System70 and Connoisseur - a new generation of PVCu windows and doors for the discerning, environmentally aware homeowner.

These beautifully engineered windows and doors are a world apart from the PVCu products of years ago. Designed to reflect the aesthetic appeal of traditional timber, these frames will really enhance and complement your home.

Heat and energy loss through windows and doors is a major contributor to global warming, and the environment played a key part in the development of Kommerling Gold. Superior insulation ensures heat-loss and energy is reduced, so your home stays warmer, cutting your heating costs and reducing harmful emissions.

In addition, Kommerling contains a lead-free stabiliser; This means your windows and doors look fresh and new for longer, but can eventually be recycled without lead damaging the environment.

You'll also be pleased to know that our windows and doors are packed with advanced security features, including corrosion resistant hardware and the latest shootbolt locking systems.

Why not think about the style of your new windows? As well as hundreds of possible styles, you can also specify tilt & turn (inward opening) windows and even traditional-looking box sash style vertical sliders.

Naturally, we can install a beautiful range of PVCu doors to compliment your new windows, including entrance doors, stable doors, patio and french doors.

# Ridon Glass and the Environment

Traditional style meets modern technology in our fantastic window range. With a number of options to customise your installation to meet the requirements of your home, you don't have to compromise at all when choosing your new windows.

The Kommerling range offers the most extensive range of profiles giving the greatest possible choice of window and door options to suit any home. Your chosen style can be finished in white, woodgrain, mahogany or golden oak, plus the added dual colour option of white inside and mahogany or golden oak on the outside. Now you can really keep your options open.

Connoisseur

Bevelled

Bay Jacking

Multipoint Locking

# Doors

There are a whole range of possibilities when it comes to doors. For a sturdy front door, our range of composite pvc clad doors are ideal. Not only do they resemble timber doors they don't need the huge care and attention of traditional timber. These doors won't rot, warp, twist or require painting, leaving you time to spend on the more important things in life. With the range of colour options you can be sure to find an ideal match for your home.

A semi glazed option on a PVCu door enables you to let much more light in areas such as dark entrances. For that added privacy, you may choose to opt for a full panelled PVCu door - ideal for shared access passageways.

# Patio Doors

High build quality and innovative features combined with good looks provide the perfect addition to any home. Our patio doors take design to an entirely new level.

We understand that needs differ from person to person, so come and talk to us about your requirements, and we'll help you find the perfect door.

including double glazing repairs

# Ridon Glass and the Environment

Ridon Glass is committed to providing products that enhance your home, while actively working to benefit the environment by recycling products and using environmentally friendly materials. With environmental issues becoming a greater concern for us, all building regulations have been developed to reflect this. As a result, there are now many ways that you can help the environment through making the right choices when undertaking improvements to your home.

PVCu is no longer manufactured using lead but with calcium-zinc, which is not only environmentally friendly, but also makes the profile stronger and more durable against even the harshest of weather conditions. In its contribution to helping the environment.

Ridon Glass predominantly uses Pilkington 'K' glass and Saint-Gobain Planitherm glass, as these types of glass ensure better heat insulation which ultimately leads to lower heating bills and fewer greenhouse emissions.

## Key Features

- **58mm or 70mm** - Slim Sight Lines Improved Aesthetics
