

Improve your Comfort Zone

Whether you live in a conservation area or simply have original windows that you wish to retain, keeping the cold and noise out can be a problem.

Now, with our beautiful range of aluminium secondary glazing, you don't need to replace your windows to have better insulation.

These stylish and tastefully designed frames blend unobtrusively with most existing windows, immediately reducing cold spots and reducing energy loss, which means a warmer room, reduced heating bills and less damage to the environment.

Secondary glazing also improves acoustic insulation, reducing the level of noise from road traffic, aircraft, and the busy outside world. As a secondary barrier, they can also provide additional protection against intruders.

Secondary windows

There are four principle styles

The Lift Out

It is the most economical and the most popular. When little demand exists to access the existing window then the lift out is the best solution. There is an outer frame into which a vent is lifted in or out. The facility permits the opportunity to clean the existing window.

Hinged units

This gives the clearest view as no transoms or mullions are involved. It is an unobtrusive product which is hinged to give easy cleaning option or easy access to the existing window.

Horizontal sliders

Another very popular configuration of secondary windows. Frequently used in commercial buildings it is an easy to install solution to noise and sound pollution.

Vertical sliders

Used when traditional vertical sliders are installed. The sight lines of the secondary vertical slider can be lined through with the existing frame to improve both heat and noise insulation.

Technical Information

Description:

Extruded from 6063 aluminium alloy in compliance with BS 1474.

Finishes:

Natural anodising to AA5 BS 3987

Polyester powder coating to BS 6496

Glazing:

In accordance with BS6206 for safety glazing. Usually 4 or 6 mm clear float glass or toughened can be used.
